ELSEVIER

Theoretical Computer Science 209 (1998) 399–400

Theoretical Computer Science

Author index volume 209 (1998)

(The issue number is given in front of the page numbers)

Aceto, L., W. Fokkink and A. Ingólfsdóttir, On a question of A. Salomaa. The equational theory of regular expressions over a singleton alphabet is not finitely based (1–2) 163–178
Allender, E., J. Jiao, M. Mahajan and V. Vinay, Non-commutative arithmetic circuits: depth reduction and size lower bounds (*Fundamental Study*) (1–2) 47– 86
Amaldi, E. and V. Kann, On the approximability of minimizing nonzero variables or unsatisfied relations in linear systems (1–2) 237–260
Apolloni, B. and C. Gentile, Sample size lower bounds in PAC learning by Algorithmic Complexity Theory (1–2) 141–162
Béguin, P. and A. Cresti, General information dispersal algorithms (1–2) 87–105
Beaudry, M., Languages recognized by finite aperiodic groupoids (1–2) 299–317
Blanchard, F. and P. Kůrka, Language complexity of rotations and Sturmian sequences (1–2) 179–193
Bodlaender, H.L., A partial k-arboretum of graphs with bounded treewidth (*Tutorial*) (1–2) 1– 45
Breslauer, D., On competitive on-line paging with lookahead (*Note*) (1–2) 365–375
Colbourn, C.J. and G. Xue, A linear time algorithm for computing the most reliable source on a series–parallel graph with unreliable edges (1–2) 331–345
Cresti, A., *see* P. Béguin (1–2) 87–105
Csuhaj-Varjú, E. and A. Kelemenová, Team behaviour in eco-grammar systems (1–2) 213–224
Demange, M., P. Grisoni and V.Th. Paschos, Differential approximation algorithms for some combinatorial optimization problems (1–2) 107–122
Downarowicz, T. and Y. Lacroix, Merit factors and Morse sequences (*Note*) (1–2) 377–387
Downey, R.G. and M.R. Fellows, Threshold dominating sets and an improved characterization of $W[2]$ (1–2) 123–140
Fellows, M.R., *see* R.G. Downey (1–2) 123–140
Fokkink, W., *see* L. Aceto (1–2) 163–178
Gargano, L. and A.A. Rescigno, Communication complexity of fault-tolerant information diffusion (1–2) 195–211
Gentile, C., *see* B. Apolloni (1–2) 141–162
Grisoni, P., *see* M. Demange (1–2) 107–122
Ingólfsdóttir, A., *see* L. Aceto (1–2) 163–178
Jiao, J., *see* E. Allender (1–2) 47– 86
Kann, V., *see* E. Amaldi (1–2) 237–260
Kelemenová, A., *see* E. Csuhaj-Varjú (1–2) 213–224
Kůrka, P., *see* F. Blanchard (1–2) 179–193
Lacroix, Y., *see* T. Downarowicz (1–2) 377–387
Mahajan, M., *see* E. Allender (1–2) 47– 86
Malesińska, E. and A. Panconesi, On the hardness of allocating frequencies for hybrid networks (1–2) 347–363
Panconesi, A., *see* E. Malesińska (1–2) 347–363
Paschos, V.Th., *see* M. Demange (1–2) 107–122
Rescigno, A.A., *see* L. Gargano (1–2) 195–211
Rössner, C. and J.-P. Seifert, On the hardness of approximating shortest integer relations among rational numbers (1–2) 287–297
Seifert, J.-P., *see* C. Rössner (1–2) 287–297

Elsevier Science B.V.

Sengupta, R. and H. Venkateswaran, A lower bound for monotone arithmetic circuits computing 0–1 permanent (*Note*) (1–2) 389–398
Vaszil, G., On simulating non-returning PC grammar systems with returning systems (1–2) 319–329
Venkateswaran, H., *see* R. Sengupta (1–2) 389–398
Vinay, V., *see* E. Allender (1–2) 47– 86
Vuillon, L., Combinatoire des motifs d'une suite sturmienne bidimensionnelle (1–2) 261–285
Xue, G., *see* C.J. Colbourn (1–2) 331–345
Zimand, M., On the size of classes with weak membership properties (1–2) 225–235
